# TFTP Server

Quick-Start Guide

This tftp server is unsupported freeware. However, here are a few hints on using it.

A) Download the TFTPD binary (tftpd.exe) and save it to your PC.

B) Start the TFTPD binary.

NOTE: The directory from where the TFTPD binary is start is also the
directory that is served up via TFTP unless you request a file name with an absolute link such as "c:\
somepath\somefile" . Normally, the files to be served out via TFTPD must be in the same directory.

FOR EXAMPLE: If the TFTPD binary is saved on the PC desktop, place
the firmware file that needs to be served out via TFTPD on the PC desktop
as well.

C) When prompted for a TFTP server, use the IP address of the PC that is running the TFTPD program.

NOTE: **Make sure the PC's firewall will permit access to the TFTP port.**
