## DCB SA-1 Speaker Amplifier

Revised October 27, 2006

### Installation:

1. Plug the 24 volt DC power supply into the power connector located on the back of the SA-1.
2. Connect an 8 ohm speaker using the green screw terminals on the rear of the SA-1.
3. Plug an RJ-45 to RJ-45 8 conductor straight through cable (such as a UTP line cord) from the E&M port on the rear of the SR-08 voice card to the SA-1 RJ-45 port. Audio input to the SA-01 is on pins 4 & 5 of the RJ-45.

### Indicators:

The front panel has a power LED that should light when 24 volt DC is applied to the unit. The Receive LED will illuminate when the SA-1 is connected to the E&M port of the SR-08 voice card and the SR-08 is powered on.
